Bulletin 79-1

October 1979

FOREWORD

This annual summary of Illinois Agricultural Statistics presents a summary of the various reports prepared and published by the Illinois Cooperative Crop Reporting Service plus selected other data series of general interest. Data for the years 1975-78 and 1979, when available, are presented for most items.

Official State estimates are included in this summary for all data items. In addition, crop reporting district and county estimates are included for major crop and livestock items. This office also issues the Illinois Annual Farm Census each year. That publication presents county totals as enumerated by township and county assessors and may not agree with official estimates.

Some of the estimates presented in this publication were prepared from State financed surveys. Funds and personnel of the Illinois and United States Departments of Agriculture are pooled in the Cooperative Crop Reporting Service in order to better serve the needs of those interested in agricultural statistics.

The Crop Reporting Service wishes to express its appreciation to the many thousands of farmers and business firms who contribute every year to provide the basis of our estimates. Only the faithful service of the corps of reporters and other cooperators makes these estimates possible.

James R. Kendall
James R. Kendall
Agricultural Statistician in Charge

GENERAL ILLINOIS INFORMATION

This first section of the Annual Summary presents a long time history of changes in Illinois' total population, farm population, number of farms and land in farms. In addition, general information about the climate of Illinois is included. The map and explanation below of Crop Reporting Districts is also presented to aid in understanding the detailed data in this report.

CROP REPORTING DISTRICTS

For statistical purposes the counties of Illinois are grouped into nine Crop Reporting Districts (shown on the map at right). These groupings represent divisions of approximately equal size with similar soils, growing conditions and types of farming.

Crop Reporting Districts are used in the compilation of most reports. It is not possible to collect sufficient data for each county to make county estimates on a timely basis. It is possible to summarize data at a district level and weight districts together by production percentages to arrive at the best State estimates.

Many data series in this bulletin present estimates for Crop Reporting Districts. Some series are further broken down into county estimates within districts.

CLIMATE OF ILLINOIS

Illinois lies midway between the Continental Divide and the Atlantic Ocean and some 500 miles north of the Gulf of Mexico. The climate is typically continental with cold winters, warm summers, and frequent short period fluctuations of temperature, humidity, cloudiness and wind direction. The excellent soil and well distributed annual precipitation of 32 to 48 inches favor a very high standard of agricultural production.

Storm systems move through the State most frequently during the winter and spring months, and cause a maximum of cloudiness during these seasons. Sunshine averages more than 70% of possible during the three summer months, and precipitation occurs mostly during short duration showers or thunderstorms.

Illinois extends nearly 400 miles from north to south and winter temperatures show a contrast of approximately 14°F in mean temperature. Temperatures reach zero or below on an average of seven days annually in the extreme north and only one or less in the far south. The lowest temperature of record is -35°F at Mt. Carroll on January 22, 1930.

The north-south mean temperature range in July is only about 6°F as both sunshine and temperature are more uniform. Temperatures reach 90°F or higher on an average of near 20 days annually in the north and about 50 days in the south and west-central. The highest temperature of record is 117°F at East St. Louis on July 14, 1954.

Latitude is the major factor in both temperature and precipitation with the northern counties averaging cooler and drier than the south. Distance from the Gulf of Mexico and lower air mass temperatures both tend to reduce precipitation in the north. Annual precipitation is approximately 1½ times as great in the extreme south as in the extreme north, but most of the excess in the south falls during winter and early spring. Average total precipitation for December through March in the extreme southeast is about twice that in the extreme northwest. Precipitation during the warm season is more uniform and the annual average for April through September ranges from 21 to 24 inches throughout the State.

Precipitation during fall, winter, and spring tends to fall uniformly over large areas. In contrast, summer precipitation occurs principally as brief showers or thunderstorms, affecting relatively small areas. This erratic occurrence of summer showers generally results in an uneven distribution.

The annual average snowfall ranges from near 30 inches in the extreme north to only 10 inches in the extreme south. The most likely form of winter precipitation in the north is snow. More than 90% of Cairo's winter precipitation falls as rain. Snowfalls of 1 inch or more occur on an average of 10 to 12 days per year in the extreme north and decrease to 3 or 4 in the far south. Snow cover of an inch or more averages about 50 days annually in the north and only about 15 in the south.

Thunderstorms average about 35 to 50 annually, but most are quite harmless. On occasion they provide the source for hail, damaging winds, and tornadoes. Hail falls on an average of two or three days annually in the same locality, but only about once every two years during periods when crops are most susceptible to damage. Not all hailstorms have stones of sufficient size or quantity to cause major crop damage.

The mean freeze-free period ranges from less than 155 days in the extreme north to more than 210 days in the extreme south. The mean date of the last spring freeze ranges from April 5 in the extreme south, to May 5 in the extreme north. The mean date of the first fall freeze ranges from October 5 in the extreme northwest to October 25 in the extreme south. Most crop damaging freezes are radiational, that is, they occur under conditions of clear skies and light winds rather than through cold air invasion of the area.

#First fall freeze averages approximately 10 days later in Cook Co. near Lake Michigan.

Dates given are average for the district. Locations within the district having similar exposure usually agree within plus or minus five days. Crop damaging freezes are most often associated with radiation freezes. Under such conditions, clear skies and light winds, the temperature may vary 10°F or more at adjacent ridge and valley locations. Tables are based on temperatures in a standard Weather Service thermometer shelter at an approximate height of five feet above ground. Under best radiational conditions the temperature will be lower at ground level.

FARM INCOME

TOTAL CASH RECEIPTS INCREASE 7 PERCENT

Soybeans provided the largest single source of cash receipts to farmers in 1978. Soybean sales accounted for 33% of total cash receipts, up from 30% in 1977. Corn cash receipts were second with 27% of the total, compared to 32% in the previous year.

Cash receipts by Illinois farmers for all commodities totaled 6.1 billion dollars, up 7% from 1977. Receipts from crops were up 4% from 1977, primarily due to a large increase in soybean receipts. Livestock receipts increased by 14% from last year, totaling 2.1 billion dollars. Increases were recorded in all categories except eggs. Cash receipts for crops accounted for 65% of the total cash receipts in 1978, compared with 67% in 1977 and 70% in 1976.

TOTAL NET FARM INCOME DOWN IN 1978

Total net farm income of Illinois farmers in 1978 decreased by 3% from last year but was 19% above the 1976 level. The total net income per farm was $10,359 compared to $10,550 in 1977 and $8,489 in 1976.

However, the realized net farm income (amount left after deducting farm production expenses from realized gross farm income) was up 20% from 1977, but 26% below the level in 1976. Even though farm production expenses were up over 1977, net farm income was still higher due to increases in all types of farm incomes.

FIELD AND SEED CROPS

1978 CROP PRODUCTION INDEX DOWN 5 PERCENT

Illinois' 1978 all-crop production index, at 179% of its 1957-59 base, is down 5% from 1977 and down 1% from two years ago. This decrease from 1977 was due mainly to the decline in yield and production levels for soybeans, wheat, and oats. The increase in corn yield and production could only partially offset these declines. Farmers in Illinois harvested 22,714,000 acres of crops in 1978 as compared with 23,441,000 acres in 1977 and 23,030,000 acres in 1976.

ALL CROP PRODUCTION INDEX (1957-59=100): 1958-78

CROP DEVELOPMENT and WEATHER 1978

1978 CROP DEVELOPMENT

Weather in 1978 was generally cool and dry, bringing about slower than normal development of most crops. Small grain development progressed behind normal due to unfavorable winter conditions and below average spring temperatures. Fieldwork in early spring was hindered by a large amount of moisture from the thaw and above normal precipitation in May.

The 1978 winter wheat crop was planted at a near normal pace but it had to survive one of the coldest winters in recent years. Snow cover protected the crop in many areas and crop condition was reported as mostly good. Wet fields and cool temperatures in the spring caused late development Statewide. The crop matured in mostly good shape. Harvest progressed behind 1977 and the average and was virtually complete by the end of July.

Corn planting began the end of April and proceeded behind 1977 and the average through the planting season. Planting was virtually complete by mid-June. Yields were generally above 1977 and the quality of the grain was good. Moisture content at harvest was lower than in recent years. Harvest progressed ahead of normal and was practically complete by mid-November.

Planting of the 1978 soybean crop lagged behind 1977 and was virtually complete by the end of June. Crop development was behind 1977 and the average but matured in mostly good condition. Because of the dry fall, soybean harvest progressed ahead of 1977 and the average. Soybean yields were down 5.0 bushels per acre from 1977, although the quality of beans was good.

Seeding of the 1978 oats crop began the first part of April and progressed behind normal. Planting was not complete until about mid-May. Crop development was behind the average in 1978 and the crop was in a generally fair-to-good condition. Harvest was complete by mid-August. Final yields for 1978 were down as was harvested acres.

There was virtually no change in 1978 hay yields from 1977, but total production was slightly lower due to a small decrease in acreage. The hay crop was in mostly good condition throughout the growing season. All cuttings of alfalfa hay progressed at a near normal pace, with the cutting of red clover slightly behind normal. Final cuttings of alfalfa were practically complete by the third week of September.

Rye production increased 12% above 1977 levels as harvested acres and yields increased slightly. For the third consecutive year barley production decreased, with harvested acres also continuing to decline. Sorghum for grain production increased 13% as harvested acres and yield both increased from 1977.

Seeding of the 1979 winter wheat crop began around the middle of September and progressed at a near normal pace. Planting was virtually complete by early November. The seedings were in mostly good condition through the end of the year. Snow cover added some needed protection for the wheat from cold temperatures in December. Plowing for 1979 corn and soybean acreage progressed ahead of the average and was 70% complete by the end of 1978.

1978 WEATHER

Illinois was cool and dry during 1978. The Statewide precipitation level was 1.96 inches below normal with an accumulation of 38.03 inches for the year. Temperatures averaged 2.8 degrees below normal providing an average annual temperature of 53.0 degrees. Seven months had below normal precipitation, while ten months recorded below normal temperatures.

January and February recorded below normal precipitation in every district with the south recording the lowest departures. Precipitation Statewide averaged near normal in March due to heavy rains in the south. Precipitation continued below normal in many sections during April. Heavy but scattered rains in May caused above normal precipitation in many areas except in the south. Flooding occurred in some portions of the State. June was the driest month of 1978, but heavy rainfall at the end of the month and the first few days of July caused widespread flooding in the north. July had above normal precipitation in every district except the southeast. August through October recorded below normal precipitation in many sections of the State. However, local heavy rainfall caused flooding during August through September. November and December -- both received above normal precipitation in every district. Heavy precipitation returned to the State during the latter part of December.

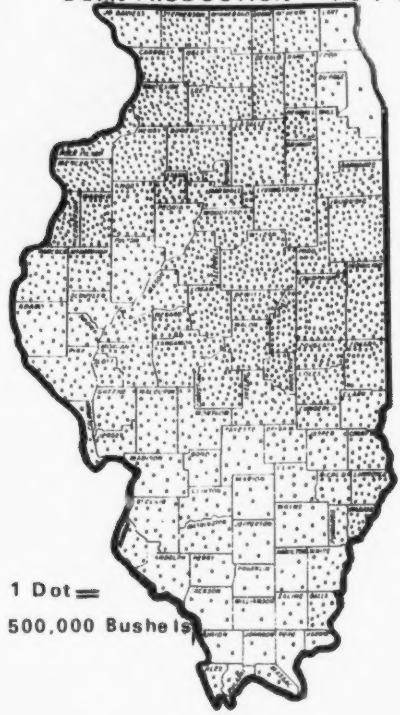
Temperatures for the first 8 months of 1978 were below normal in many areas of the State as a cool period continued from 1977. The first 3 months were very cold with February being one of the coldest months in history, especially in the northern portions of the State. Some stations in the north set a new record for the most consecutive days of maximum readings below freezing. New minimum temperature records were also set. March was cold during the first three weeks with minimum readings dropping below zero degrees in many areas. A short-lived warm trend developed during the fourth week. In April, the north continued below normal while the south recorded above normal temperatures for the first time in 5 months. May, July, and August had below normal temperatures in every district and set several new minimum temperature records. June, however, was near normal. September temperatures averaged above normal for the first time in 1978 and the north finally broke a 14-month, below normal period. October recorded below normal temperatures in every district with a few new record lows. November was above average, especially, in the south. Several new maximum temperature records were set during the month as readings climbed into the 70's and 80's in the first week. The year ended with below normal temperatures returning to many districts in December. Temperature departures ran as much as 15 degrees below normal during the first week which was the largest departures since May.

January snowfall was very heavy for the second straight year with five separate snowfalls. During February several new seasonal snowfall records were set in scattered sections of the State. March produced one of the heaviest snowfalls in history and a major ice storm caused widespread damage, particularly in the southern areas. November and December recorded 5 separate snowstorms.

A total of 13 tornadoes was recorded during 1978 as compared to 33 in 1977. June was the most active month with 5 tornadoes touching down in the northeast sections.

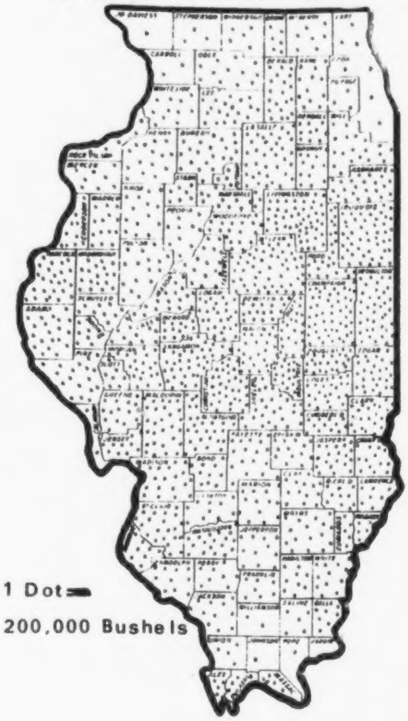
DISTRIBUTION OF MAJOR CROPS

CORN PRODUCTION – 1978



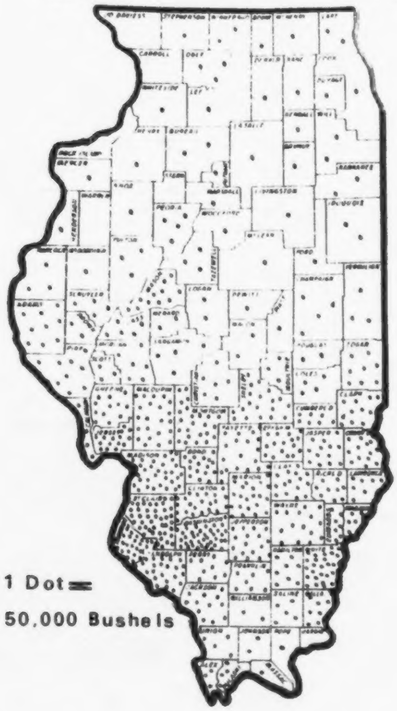
1 Dot = 500,000 Bushels

SOYBEAN PRODUCTION – 1978



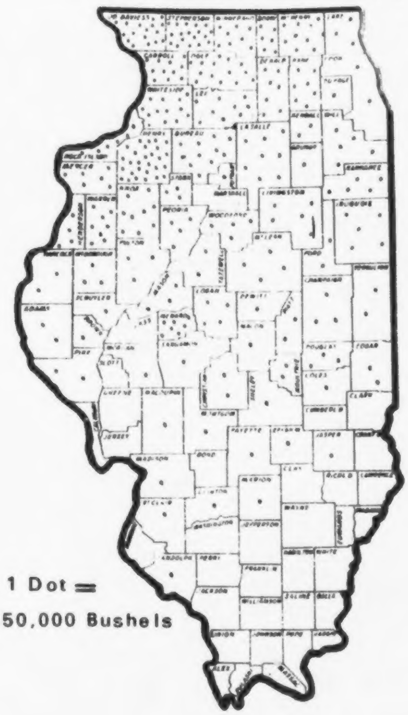
1 Dot = 200,000 Bushels

WHEAT PRODUCTION – 1978



1 Dot = 50,000 Bushels

OAT PRODUCTION – 1978



1 Dot = 50,000 Bushels

ILLINOIS' POSITION IN NATION'S CROP PRODUCTION

Crops	Date	U.S. total	Illinois total	Percent of U.S. total	Illinois' rank among States
		- 1,000 bushels -		Percent

CROP DEVELOPMENT and VARIETY INFORMATION

Crop development information is collected and published each week during the crop preparation and growing season in the Weekly Weather Crop Bulletin. In this section, planting and harvesting information for major crops is summarized along with selected information on crop maturity.

Also included in this section are data on leading varieties of soybeans, wheat and oats; and planting and harvesting methods for corn.

FRUIT

1978 APPLE PRODUCTION

Illinois commercial utilized apple production totaled 89 million pounds (2,119,000 bushels, 42-pound equivalents) in 1978, down 18% from 1977. Quality and size of the fruit were variable by area in 1978. A minimal amount of insect and disease problems were reported during the growing season and no problems were encountered during harvest. Golden Delicious was the leading variety, accounting for 32% of the crop. Jonathan ranked second with 28%, and Red Delicious was third at 25%. These three varieties accounted for 85% of the total Illinois crop in 1978.

1978 PEACH PRODUCTION

Illinois peach production for 1978 was estimated at 16 million pounds (333,000 bushels, 48-pound equivalents), almost double the 1977 production of 9 million pounds. Although there was some damage during the 1977-78 winter, it was less severe than the previous one. Thus, crop production improved even though peach conditions were variable. Value of the 1978 crop totaled $3,50[illegible],000, compared to only $1,476,000 the previous year. Price per pound increased to 21.9 cents, 5.5 cents above the 1977 price.

VEGETABLES

1978 PROCESSING SUMMARY

Total 1978 production of the principal processing vegetables (cabbage for kraut, cucumbers for pickles, lima beans, green peas, sweet corn, snap beans, tomatoes and beets for processing) is estimated at 352,050 tons, up 6% from the 1977 production of 331,400 tons. The harvested area is estimated at 95,180 acres, up 4% from the 91,840 acres harvested the previous year. Increased acreage and higher average yields contributed to the higher production level relative to 1977. Estimates for Illinois carrots for processing, cabbage for kraut, cucumbers for pickles, lima beans, green peas, tomatoes and beets for processing are not published separately in order to avoid disclosing individual operations.

1978 FRESH MARKET SUMMARY

Total production of the principal fresh market vegetables (fresh and processed asparagus, fresh and processed carrots, and fresh market cabbage and sweet corn) in 1978 is estimated at 775,000 cwt., up 1% from the previous year's production of 771,000 cwt. Harvested acreage is estimated at 9,950 acres compared to 10,250 acres harvested in 1977. Value of the 1978 crops was $6,905,000, up 36% from the 1977 value of $5,067,000.

FLOWERS AND FOLIAGE PLANTS

TOTAL VALUE OF FLOWERS AND FOLIAGE PLANTS DOWN SLIGHTLY

Gross wholesale value of sales of selected flower types (cut and potted) and foliage plants in 1978 by Illinois commercial producers was $25,183,000. The 1977 value of sales at wholesale for these items was $25,788,000, 2% more than for 1978. The gross wholesale value for cut flowers was down on all surveyed types, except for pompon chrysanthemums and snapdragons. Wholesale value for potted plants (including flowering and vegetable bedding plants) dropped slightly, as four types trended up and the other four went down. The wholesale price per unit in 1978 for cut flowers increased, and all potted plants, except for bedding plants, also continued their upward trend from last year. Volumes sold for all cut flower types were down, except pompon chrysanthemums, while volumes sold for potted plants were up, except for potted lilies and potted poinsettias.

Net value of sales of foliage plants for indoor or patio use was $6,015,000, down 2% from $6,145,000 in 1977. The 1978 area in production, at 1,132,000 square feet, is up 57% from the 723,000 square feet producers devoted to foliage plants the previous year.

The Illinois Cooperative [illegible] Reporting Service began making official estimates in [illegible] for the production of snapdragons, potted poinsettias, potted geraniums, potted lilies, potted hydrangeas, and flowering or vegetable bedding plants. Thus, no production figures are available for these items prior to this time.

LIVESTOCK AND POULTRY

The total value of all livestock species on Illinois farms at the beginning of 1979 was 1,675.3 million dollars, 51% greater than the inventory value the year before.

The number of cattle and calves on Illinois farms on January 1, 1979 was 2,850,000 head, 100,000 less than the previous year. However, the value per head increased $150 to $385, resulting in an increase in total value to $1,097,250,000. This was 58% more than the January 1, 1978 inventory value of $693,250,000.

The total value of hogs and pigs on December 1, 1978 was $553,475,000 compared to $393,450,000 the year before. While hog numbers increased 7% from 6,100-000 on December 1, 1977 to 6,550,000 a year later, the value per head increased $20.00 to $84.50, resulting in a 41% increase in total value.

The number of sheep and lambs on January 1, 1979 was 184,000, the same as a year earlier. Value per head went from $39.50 to $68.00, resulting in a total value of $12,512,000, an increase of 72% over the preceding year.

Chickens (excluding broilers) on December 1, 1978 numbered 7,600,000, down 100,000 from the previous year. Value per bird remained the same at $1.45, resulting in only a 1% decrease in total value compared to December 1, 1977.

The December 1, 1978 inventory of turkey breeder hens was 59,000, an increase of 9,000 breeders from the year before. The average value per head increased $4.00 to $18.00, resulting in a 52% increase in total value over the preceding year.

VALUE OF LIVESTOCK INVENTORY - FIRST OF THE YEAR, 1960-1979 (INCLUDES ALL CATTLE AND ALL SHEEP--JAN. 1 AND ALL HOGS, CHICKENS AND TURKEY BREEDERS--DEC. 1 PRECEDING YEAR)

PRICES

1978 Crop and Livestock Indexes

The Illinois Prices Received Index has been recomputed using new quantity weights each year. The new Illinois Index will rely on weights based on the average value and quantity of each commodity sold during a previous 5-year period. The new index series has been recomputed from 1956 to the present. Copies are available on request to P. O. Box 429, Springfield, Illinois 62705.

The all farm products index of prices received by Illinois farmers in 1978 was 110% of the base period 1972 through 1976, 7 points below the 1977 index. Prices received by farmers improved early in the year through June but dropped and fluctuated mildly the remainder of the year.

Crop prices were down considerably in 1978 as the index only averaged 99% of the base period. Livestock prices showed improvement until mid-year when prices dropped in July. Prices received for livestock strengthened again and peaked in October. The increase in the livestock price level could not offset the lower crop prices resulting in the overall reduction of prices received by farmers in 1978.

1/Annual average is for December previous year through November current year.

PRICES PAID

Average prices paid by farmers are collected for the most important commodities purchased by farmers. Price information is based on voluntary reports of merchants and dealers selling to farmers. Information on prices paid by farmers is obtained to provide a measure of what farm products will buy in terms of food, clothing, feed, machinery, fertilizer and other items farmers need for living and production.

The table below shows average prices paid by Illinois farmers for selected feeds and motor supplies in 1976-78. Beginning in January 1977, the Bureau of Labor Statistics Consumer Price Index (CPI) was used to measure farmers' costs for family living items. Therefore, data on family living costs are no longer collected by the Department of Agriculture.

Regional prices paid for seed and fertilizer are published monthly in AGRICULTURAL PRICES, and regional prices for building materials, farm machinery, farm supplies, and pesticides are published in June each year. Both publications are available from the Economics, Statistics and Cooperatives Service of the U.S. Department of Agriculture in Washington, D. C.

PRICES PAID: Average prices paid by Illinois farmers, December 15, 1976-78 1/

Item and unit	1976	1977	1978
		Dollars	
		FEED	
Soybean meal, 44% protein, 100 lbs.	12.50	11.00	12.50
Laying feed "complete feed" per ton	182.00	173.00	180.00
Chick starter feed, per ton	200.00	191.00	205.00
Dairy feed, 16% protein, per ton	163.00	154.00	155.00
Hog feed, over 29% protein, 100 lbs.	13.70	12.50	14.10
Cattle feed, 30% protein and over, 100 lbs.	10.10	9.40	10.30
		MOTOR SUPPLIES 2/	
Gasoline, filling station, per gal.	.630	.650	.700
Diesel fuel, per gal.	.430	.480	.500
Motor oil, all-weather, (high detergent) per gal.	3.40	3.60	3.80
Grease, 35-lb. pail	15.50	16.50	19.00
Tires, auto, tubeless 4-ply sidewall, each			
Bias-belted, G78-15	44.00	44.50	44.50
Radial, 205-15 GR78-15	70.00	73.00	73.00
Tires, truck 7.50 x 20, 10-ply, each	82.00	92.00	99.00
Tires, tractor, rear, 13.6 x 28, 4-ply, each	145.00	150.00	145.00
Storage batteries, 54 plates, 12 volt, each	39.50	3/41.50	3/43.00
Anti-freeze, permanent, per gal.	4.80	4.30	4.10

1/ Averages at independent and chain stores. 2/ October 15. 3/ CPR-220-310 AMPS, 1977 and 1978.

OTHER DATA SERIES

This section contains data series which did not fall under other major category headings. Included in this bulletin are fertilizer information, and farm employment and wage rates.

1/ This fertilizer information was obtained when interviewing farm operators for Objective Yield Surveys conducted by the Statistical Reporting Service and are not official estimates of total fertilizer use. The samples are relatively small and the data are subject to sampling fluctuation. 2/ Percentages apply to acres receiving fertilizer, not to total acres harvested.

FARM LABOR FORCE

COMMODITIES INCLUDED IN THE ILLINOIS FARM REPORT - A BI-WEEKLY REPORT ISSUED ABOUT THE 12TH AND 25TH OF EACH MONTH BY THE ILLINOIS CROP REPORTING SERVICE

Commodity	Approximate date of report	Source of data for estimates
Field Crops:		
Winter wheat seedings	December	Farm operators
Prospective spring plantings	January, April	Farm operators
Harvested acreage forecasts	July	Farm operators
Yield & production forecasts	Monthly during growing season	Farm operators Field measurements 1/
Annual crop summary	January	Farm operators
Stocks of grain((farm and off-farm)	January, April, June, September 2/ October	Farm operators and mills & elevators
Weather - Crop	3 P.M. Monday - April thru November	Local observers
Commercial fertilizer sales	Monthly	Bureau of Products Inspection and Standards' totals of weekly reports filed in accordance with the Illinois Fertilizer Act
Seeds	January, August, October	Farm operators and shippers
Popcorn	January, July	Processors
Fruit:		
Peach production	June, July, August, January	Fruit growers
Apple production	July, August, October, January	Fruit growers
Vegetables:		
Fresh market, acreage and production	April, July, October	Vegetable growers
Processing, acreage and production	March, June, August, September, December	Vegetable processors
Meat Animals:		
Cattle inventory and calf crop	February, August	Farm operators
Sheep inventory	February	Farm operators
Hog inventory and pig report	March, June, September, December	Farm operators
Cattle on feed	January, April, July, October	Farm operators
Sheep and lambs on feed	January	Farm operators
Lamb and wool crop	March, July	Farm operators
Commercial slaughter	Monthly	Livestock slaughter plants
Poultry:		
Chicken inventory	February	Farm operators Hatcheries
Turkey inventory	January	Farm operators Hatcheries
Egg production	Monthly	Farm operators Commercial egg producers
Chicks hatched	Monthly	Hatcheries
Milk:		
Milk production	Monthly	Milk producers
Dairy products manufactured	June	Milk product manufacturers
Honey:		
Number colonies and production honey and beeswax	January	Honey producers
Prices:		
Local market prices of farm products	Monthly	Farm product buyers
Prices paid by farmers for feed	Monthly	Merchants
Timber prices	April, October	Timber buyers
Farm Employment:		
Employment on farms and farm wage rates	February, May, August, November	Farm operators

---

1/ Counts and measurements from small plots at monthly intervals prior to maturity. Mature grain and soybeans harvested and subjected to detailed laboratory analysis. 2/ Soybeans only.
